

Quiz 1: Get a Web Server Up and Running

- **Due** Jan 14 by 11:59pm
 - **Points** 100
 - **Submitting** a website url
-

For this quiz you need to demonstrate that you have access to a publicly accessible website that has access to a MySQL database. Node.js is currently the officially supported option for this class and we can provide help if you have issues with. You are welcome to use other platforms but you will need to implement SQL directly in the code of whatever platform you choose, this means you may want to stay away from things like Django which automatically map queries to objects.

The deliverable for this is a URL of a website that demonstrates accessing a MySQL database that we can access directly (it is OK if it requires us to be on the OSU VPN).

If you follow the Node.js guide in this module, a URL to the running diagnostic module will be sufficient for this quiz as well as the MySQL setup quiz.
